What we will cover Today

Introduction: Stakeholder in TRS, Multi-stakeholder TRS

Findings from our Literature Review

Q&A and Discussion

The background image shows a city street scene. In the foreground, there are several multi-story buildings with light-colored facades and numerous windows. Some buildings have dormer windows on their roofs. In the background, two prominent blue domes with gold finials are visible against a hazy sky. The overall scene is captured in a slightly desaturated, muted color palette.

Multistakeholder Recommender Systems

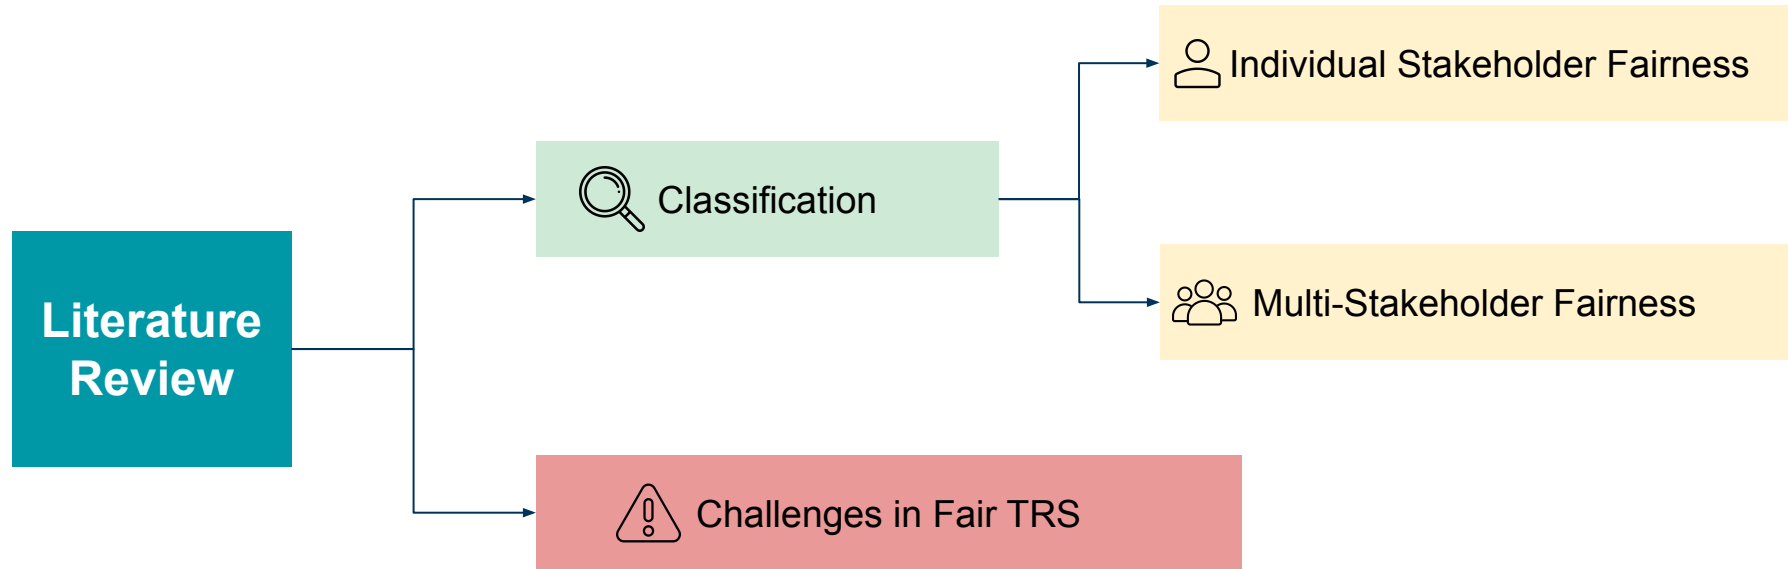

Ideal Scenario

- Balances the **needs** of **all stakeholders** i.e. is **fair** to all of them
 - ✓ Consumers (**C-Fairness**)
 - ✓ Item Providers (**I-Fairness**)
 - ✓ Platforms (**P-Fairness**)
 - ✓ Society (**S-Fairness**)

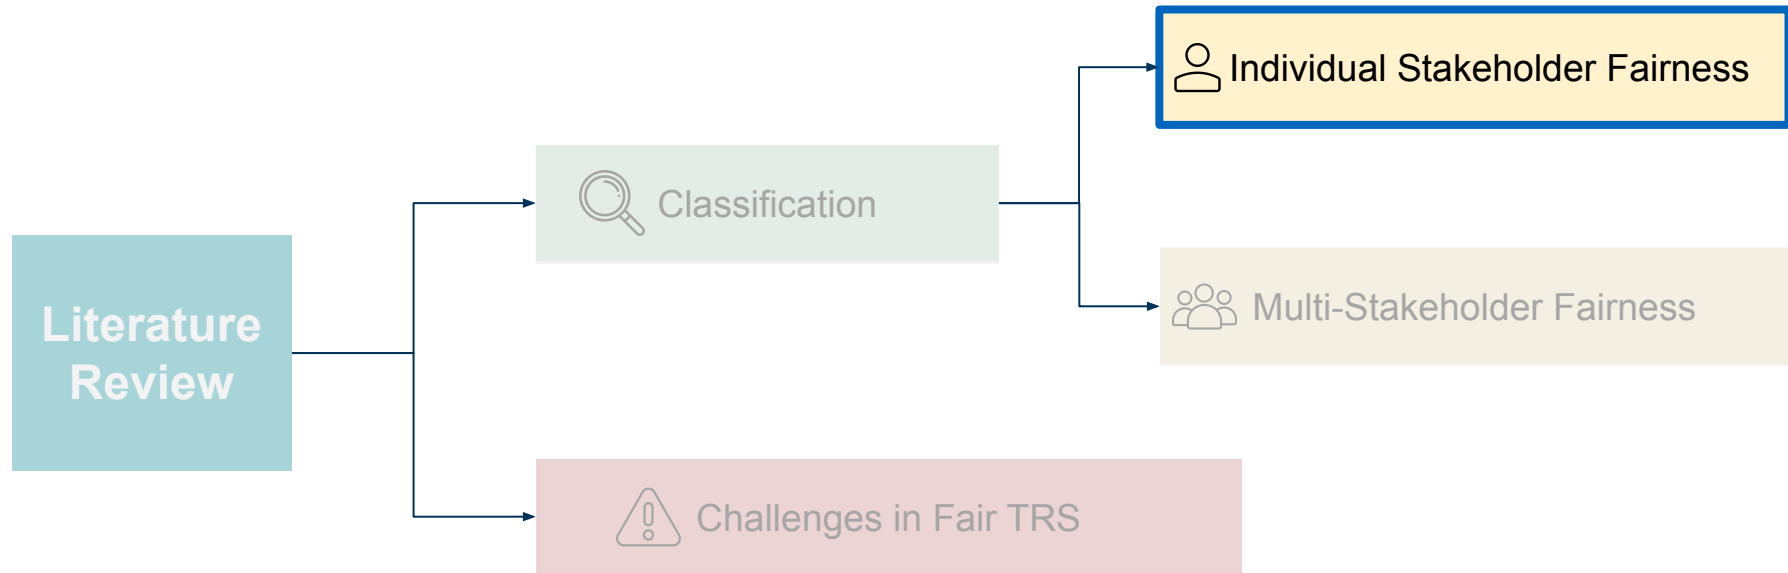

The background of the slide is a faded, light-colored photograph of a city street. In the upper portion, two prominent blue-green domes with gold finials are visible against a pale sky. Below them, several multi-story buildings with numerous windows and dormer windows line the street. The overall aesthetic is clean and minimalist.

Individual Stakeholder Fairness in TRS

★ Main Fairness Criteria

Fairness Type

Consumer Fairness (**C-Fairness**)

Item Provider Fairness (**I-Fairness**)

Platform Fairness (**P-Fairness**)

Societal Fairness (**S-Fairness**)

Main Fairness Criteria

Individual & Group Fairness

Popularity Bias, Exposure Bias

Ranking Bias

Sustainability

Individual Stakeholder Fairness in TRS

👁️ Focus

Total papers in TRS: 66; Stakeholder-focused papers in TRS: % breakdown

S-Fairness

6.0%

P-Fairness

29.0%

C-Fairness

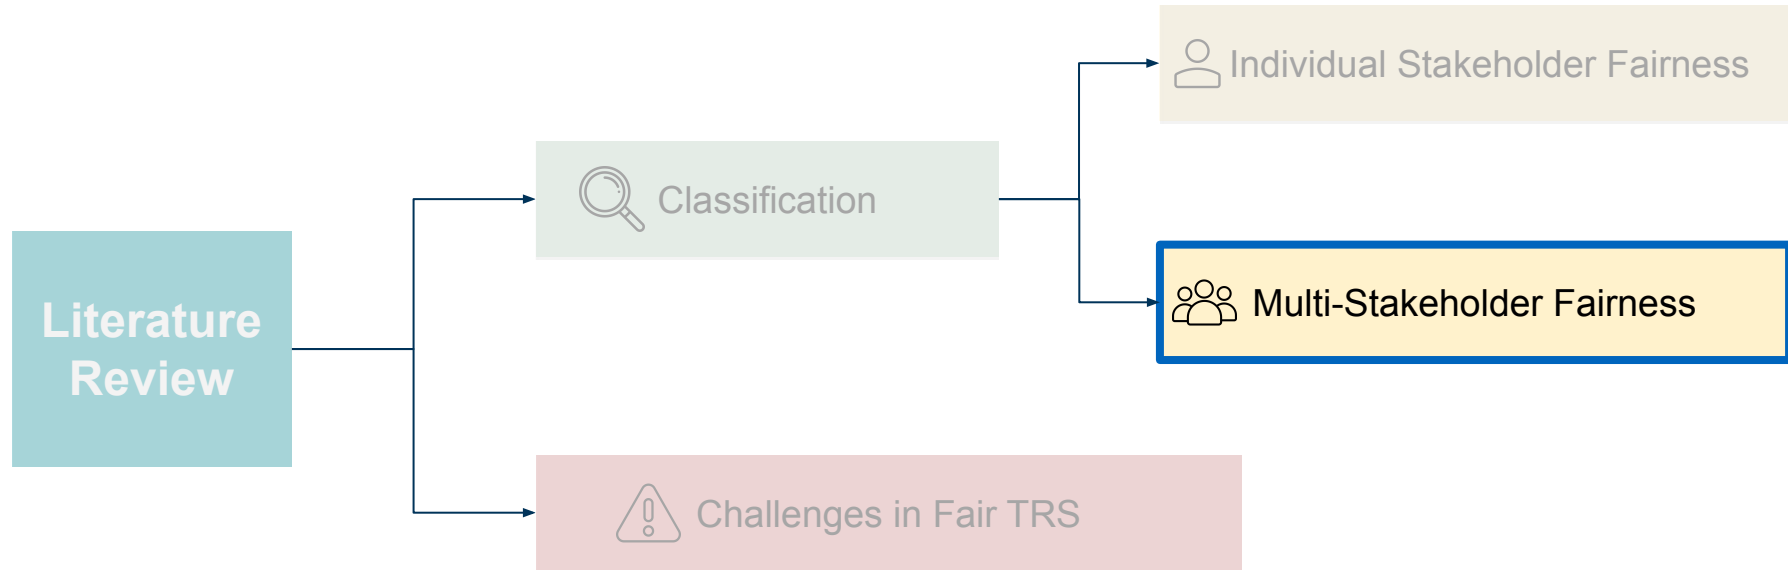

32.0%

I-Fairness

33.0%

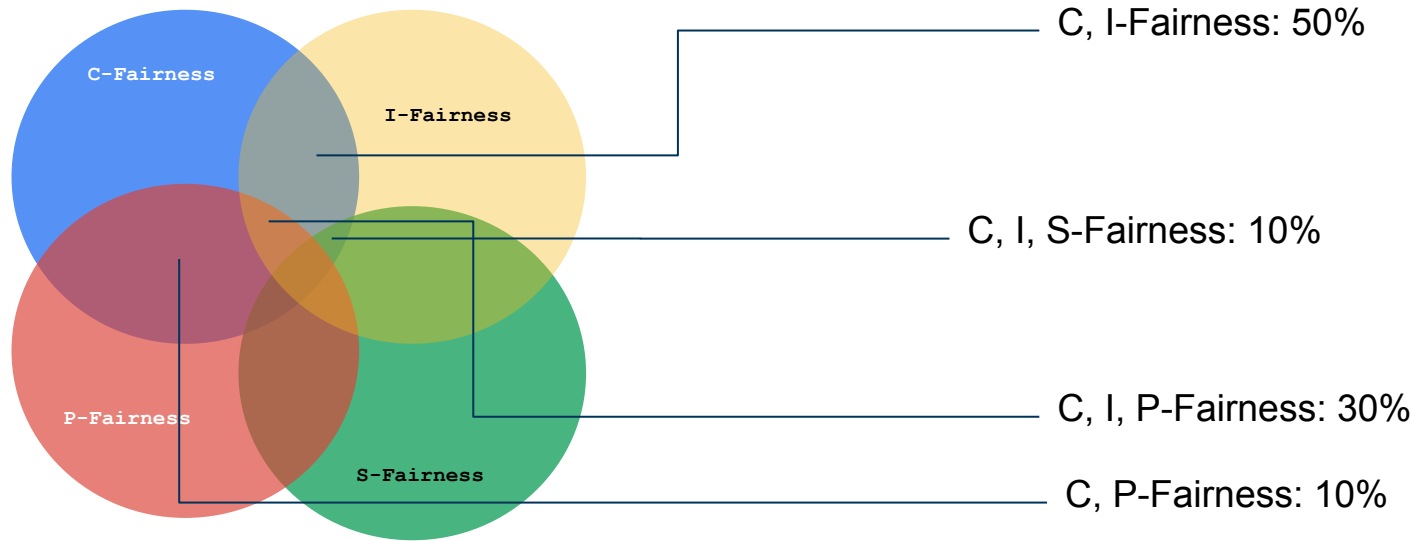

- ✓ Consumers (**C-Fairness**)
- ✓ Item Providers (**I-Fairness**)
- ✓ Platforms (**P-Fairness**)
- ! Society (**S-Fairness**)

Literature Review: Fairness in TRS

Multi-stakeholder Fairness in TRS

★ Main Fairness Criteria

Literature Review: Fairness in TRS

Challenges in Fair TRS

★ Modeling Individual Stakeholder Utilities

- Utility modeling is **complex** in TRS due to dynamic factors such as context, seasonality, travel regulations etc.
- Most **research on modeling individual stakeholder utilities** such as consumers and item-providers and platform.
- Modeling of **utilities of Society as a stakeholder** has often been overlooked.

Challenges in Fair TRS

★ Complexity in inter-stakeholder relationships

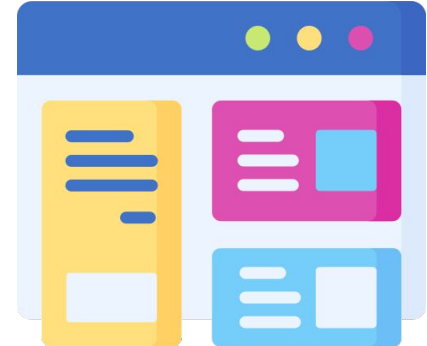

- Only **few studies** focus on multi-stakeholder relationships in TRS
- Relationship **between stakeholders** can impact interactions and outcomes.
- **Temporal factors & external influences** affect recommendation relevance

Challenges in Fair TRS

★ Explanations to improve User Interfaces

- Providing explanations behind recommendations
→ users **understand the fairness objectives** of the recommender system.
- Explanations also enhance **transparency, efficiency, effectiveness, trust and user satisfaction**.
- Research on **explaining recommendations with a multi-stakeholder fairness** objective in TRS is limited.

Challenges in Fair TRS

★ Insufficient Data, Missing Metrics and Evaluation

- Limited publicly available data; often relies on **synthetic or proprietary datasets**
- Available data **lacks critical information** such as user interactions, environmental metrics etc.
- Fairness **metrics are domain specific** and often hard to generalize for other scenarios.
- **User acceptance of the fair ranked results** is often overlooked.

The background image shows a city street scene. In the foreground, there are several multi-story buildings with light-colored facades and numerous windows. Some buildings have dormer windows on their roofs. In the background, two prominent blue domes with gold finials are visible against a hazy sky. A white rectangular box is overlaid on the left side of the image, containing the word "Conclusion" in a large, black, sans-serif font.

Conclusion

Summary

- Limited exploration of fairness in the travel and tourism domain compared to other sectors.
- Neglect of responsible recommendations (S-Fairness) despite its significance in addressing over- and under-tourism and environmental concerns.
- Limited research on explaining recommendations with multi-stakeholder fairness objectives in the tourism industry.
- Challenges related to data availability, particularly detailed and representative data.
- Insufficient focus on user acceptance of re-ranked or fair recommendations in existing studies.
